## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-6 and 18-25, drawn to a method and means for increasing processing capabilities with accessing via a multiplexer, classified in class 710, subclass 51.
  - II. Claims 7-17, drawn to a method and means for the operation of multiple processors, classified in class 345, subclass 502.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as having regulation of data via a multiplexing method for flow control through one or more one or more processing systems. See MPEP § 806.05(d).

Because these inventions are distinct for the reason given above and have acquires separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be completed must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143). Applicant is further advised that if any claim presented in a

continuation or a divisional is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections for the claims of the instant application.
